

# Finnish-made Jykevä drain plow

**The JYKEVÄ drain plow helps to prevent standing water problems caused by summer and autumn rains, allowing you to effectively and economically direct water from furrows and sources into underground drainage and open ditches. The drain plow can also be used to install drainpipes in the ground.**

The drain plow has become a very popular choice, particularly for fields with old underground drainage, where the drainage works well, but the surface of the field has become compacted, thus preventing water from permeating the soil. Running a drain plow crosswise over old underground drainage helps harmful standing surface water permeate the compacted layer of soil, thus directing it to the underground drainage.

As many as hundreds of metres of pipe can be laid when the conditions are right. The JYKEVÄ drain plow can also be used to cut, for example, trenches for cable conduits or grounding cables.

Ditches cut with the JYKEVÄ drain plow, with and without a drainpipe.

For optimal results, the JYKEVÄ drain plow should be used for cutting underground drainage ditches in the spring after sowing, when the field surface is dry and flat. As the field will not be worked by machines for a while, the furrows made by the blade are highly water-permeable, thus allowing water to reach the weepholes or pipe at the bottom of the ditch unimpeded.

The drain plow can also be used to cut underground drainage ditches in the autumn before the post-harvest plowing.

Ditches cut with our drain plow can last for several years. When drainpipes are also laid at the same time the ditch is cut, the effectiveness of drainage is multiplied.

#### **Technical specifications:**

- Max. working depth: 75 cm
- Thanks to the sharpened cutting blade, there is little tractive resistance - approx. 50 hp is all that is needed to pull the unit.
- Breakaway bolt on the blade prevents damage to the tractor and plow
- Blade 20 x 200 mm 400 HB wear-resistant steel
- Ball hitch 75 mm, with a coupler for fastening a drainpipe
- Weight: approx. 130 kg

A 50 mm drainpipe fastened to the ball hitch.
